

MEELI

WANTS TO GO HOME

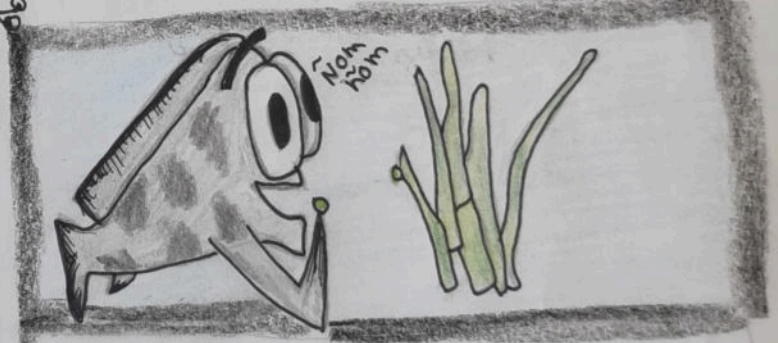

"Spatial memory in fish."

Meeli got lost, but luckily

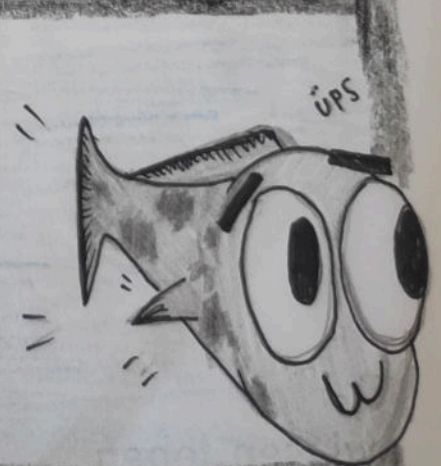

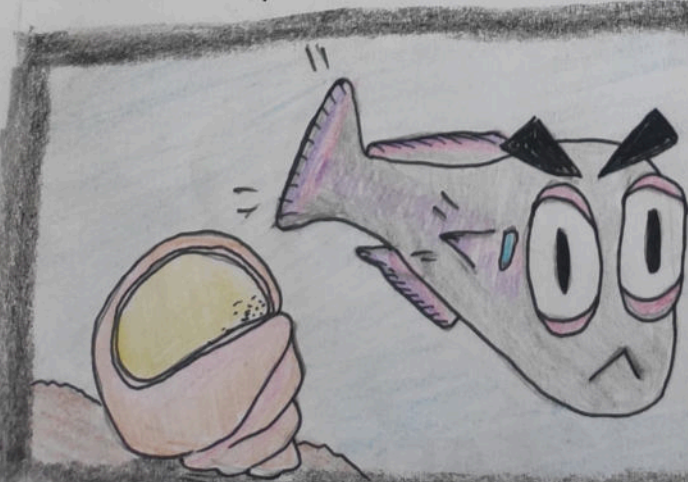

... a COGNITIVE MAP of its surroundings, this is very important to...

remember food locations,

... hide from predators,

not to end up in the territory/ living room of your neighbor, and much more!

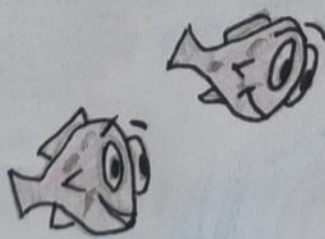

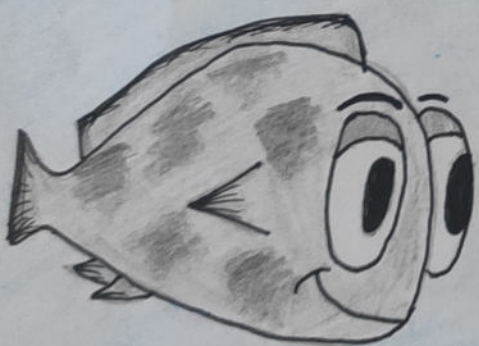

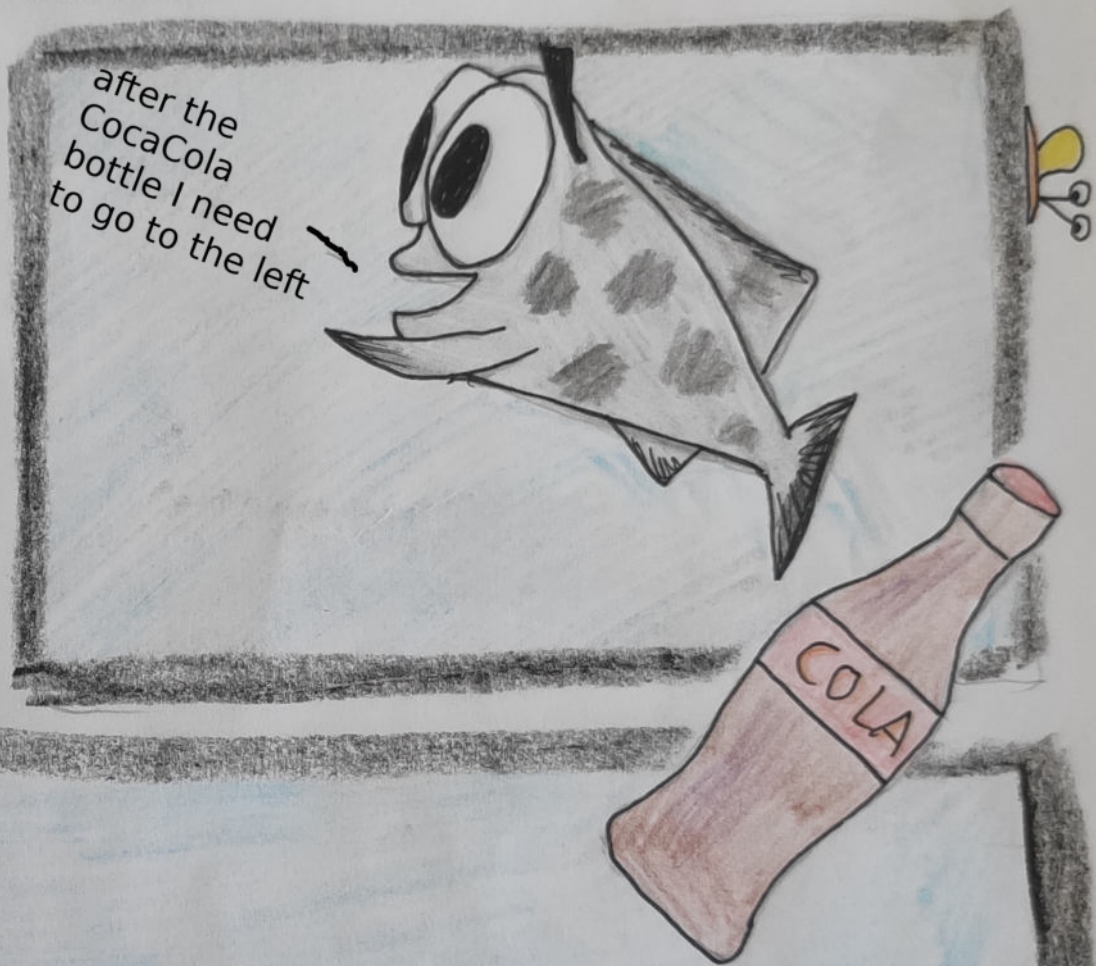

to orientate itself, Meeli uses ALLOCENTRIC cues. These depend on the position of external objects in space.

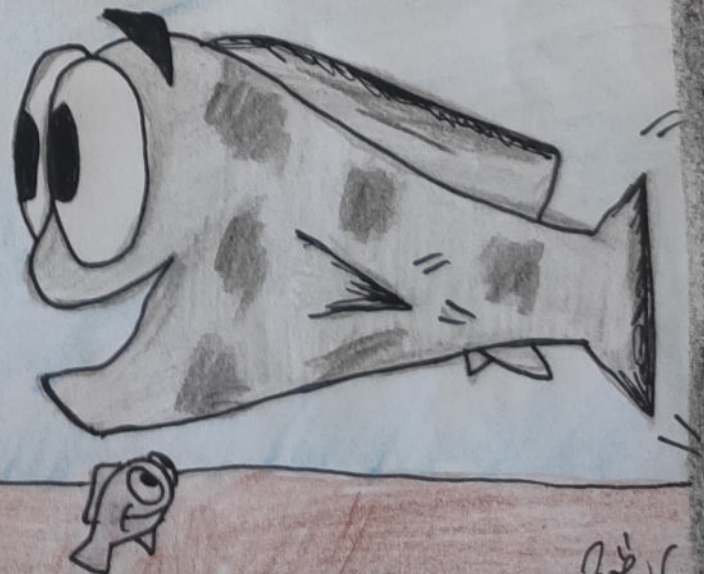

Like, for example, these CocaCola bottle and the flip flops.

... and EGOCENTRIC cues which depend on the position of objects in relation to the viewers body.

Such as left and right.

Yay!

2006

Meeli made it back home and the entire family is very happy about it.
